Profile Summary

- Senior Software Engineer with 7+ years of experience designing and scaling **distributed systems, microservices architectures, and high-performance APIs**. Proven track record of building **scalable, fault-tolerant, and highly available systems**, reducing operational effort by up to 99% and optimizing latency by over 90%. Strong expertise in Java, Spring Boot, **event-driven architectures, caching strategies, and system design for large-scale applications**.

Work Experience

Wissen Technology (Morgan Stanley)

Senior Software Engineer

27 June 2025 - Current

- Built flow accelerator platform automating end-to-end market onboarding (agent accounts, depositories, legal entities, trade scoping), **generating PRs and Liquibase scripts**, reducing onboarding effort from **3 weeks to 10 minutes** (~99% reduction).
- Built an **agentic reconciliation analysis system** aggregating logs, database records, and knowledge base of repositories across mainframe and cloud systems, reducing manual reconciliation effort from **2 weeks to minutes** with automated **break/mismatch analysis and business insights**.
- Designed and implemented a global market scoping platform to migrate from agent-account & legal-entity based rules to a **market-driven architecture**, significantly **reducing rule explosion** and simplifying **on-boarding** across regions.
- Designed highly available settlement systems across Asia markets using distributed architecture, ensuring fault tolerance, data consistency, and scalability across multi-region financial flows.

TCS (Ericsson)

Systems Engineer

04 April 2022 - 25 June 2025

- Reduced API latency from **12s to 40ms** (~99%) by implementing **cache-aside strategy** with **eventual consistency**. (**MongoDB + Kafka**)
- Designed **event-driven architecture** using Kafka with partitioning and horizontal scaling, enabling **high throughput** asynchronous processing.
- Led migration to **scalable microservices architecture**, ensuring **high availability** and **fault tolerance**.
- Developed **non-blocking asynchronous APIs**, improving **throughput** and handling peak traffic efficiently.
- Implemented secure authentication system using **Azure AD**, improving **system security** and scalability.
- Improved **system reliability** by resolving **critical vulnerabilities** and implementing **resilience patterns**. (retry, fallback, circuit breaker)

HighRadius Technologies, Hyderabad

Growth Path:

Software Development Intern	Jan'19 – Apr'19
Associate Software Engineer	1 May 2019 – Jun'20
Associate Technical Consultant	Jul'20-Nov'21
Technical Consultant	Oct'21- 31 March 2022

- Designed scalable **rule-engine architecture** for **remittance recommendations**, improving automation from **20% to 80%**.
- Built **high-volume** payment file processing pipeline (**BAI2 & MT940**), enabling **scalable ingestion** of financial data.
- Developed **observability framework** (logging + tracing) to identify **performance bottlenecks in distributed systems**.
- Mentored 10+ engineers**, improving delivery efficiency and system understanding.

System Design & Architecture Highlights

- Designed distributed reconciliation system processing multi-source data (logs, DB, services) using event-driven architecture (Kafka), ensuring scalability and fault tolerance.
- Architected cache-aside strategy with eventual consistency reducing latency from 12s → 40ms while maintaining data correctness.
- Built microservices-based onboarding platform with automated workflows, reducing manual effort by 99% and improving deployment velocity.
- Implemented resilience patterns (circuit breaker, retry, fallback) ensuring high availability in critical financial systems.
- Designed observability framework (logging, tracing, metrics) enabling faster debugging and performance tuning.
- Experience with consistency models: eventual consistency, idempotency, distributed transactions (Saga patterns).

Key Achievements

- Reduced market onboarding time for settlements from 3 weeks to 10 minutes (~99% improvement).
- Reduced reconciliation effort from weeks to minutes using Agent AI Workflow Orchestrator.
- Improved API latency by ~99% (12s to 40ms).
- Increased automation from 20% to 80% via rule-engine system.

IT Skills

- **Architecture:** Microservices, Distributed Systems, Event-Driven Architecture, System Design
- **Languages:** Java, Python, C++, Node.js
- **Frameworks:** Spring Boot, Spring Cloud, Spring Security
- **Databases:** MySQL, MongoDB, Elasticsearch
- **Messaging:** Kafka, Azure Service Bus
- **Cloud:** AWS, Azure
- **DevOps:** Docker, Kubernetes, Jenkins, Terraform, GitHub Actions
- **Tools:** IntelliJ, Git, Postman, JProfiler, Claude Code, VS Code
- **Concepts:** Idempotency, Eventual Consistency, Distributed Transactions, Caching Strategies
- **AI:** Agentic Workflows, LangGraph, Knowledge Graphs

Project

Treasury Application

- Built platform to track **payments, receivables, and outstanding balances across regions**
- Designed backend services for **real-time financial visibility and reporting**

Education

- **B.Tech. in Computer Science** from SRM University, Chennai in **2019**; 85.09%
- **12th** from Sri Chaitanya, Hyderabad in **2015**; 90.3%
- **10th** from Slate The School, Hyderabad in **2013**; 9.3 GPA
